

## TITLE: MULTIPLE LOCALE BASED DISPLAY AREAS

## ABSTRACT OF THE DISCLOSURE

A method and graphical user interface (GUI) for displaying information in accordance with an associated locale. The method includes the steps of associating each of a plurality of sets of information with one of two or more locale designations and displaying and manipulating information in accordance with properties of the associated locale designations. The GUI includes display areas for displaying information associated with the locale designations. The present invention also encompasses a system and computer program product for associating locale designations with display information and displaying and manipulating the information in accordance with properties of the associated locale designation.
